ELECTRONIC SWITCH

HRC9256 On/Off Electronic Switch

HRC Racing introduces its On/Off Electronic Switch, a smart and small MCU controlled on/off switch for any RC model.

A simple button operates the switch without the usual problems of contact of the ordinary mechanical switches.

This unit is sealed unit and can easily be mounted to the transponder mount of your model or anywhere else using double side tape.

The HRC Racing switch also features a LiPo mode. By turning this on, the switch unit will automatically detect low LiPo battery voltage and cut off power to protect your LiPo from over discharging.

This of course can be turn off if you have other safeguards in place or using NiMH/NiCad battery.

Beside that the power switch informs you about the remaining capacity and conditions of your battery pack.

Delivered with manual in English / German / French.
